Summary

Computer Engineering graduate (Honours in AI/ML, University of Mumbai) building **computer vision** and **LLM** products in **Python**, from on-device **YOLOv8** text detection to privacy-first **FastAPI** pipelines. **Winner, COHERENCE Hackathon** for CogniStream. Skilled in **OpenCV**, **ONNX Runtime**, **RAG**, and **Whisper**; keen to build with vision-language model APIs and measure every change before it ships.

Education

University of Mumbai **July 2022 – June 2026**
Bachelor of Engineering in Computer Engineering with Honours in AIML *CGPA - 7.85 / 10*
Coursework : Machine Learning, NLP, Artificial Intelligence, Operating System, DBMS

Projects

BrailleVision | *Kotlin, TensorFlow Lite, YOLOv8-nano, Jetpack Compose, CameraX* | GitHub **Apr 2026**
- Enabled visually impaired users to read text around them in real time, fully offline, by running **YOLOv8-nano** (TensorFlow Lite) on-device on the live camera feed and reading detections aloud via TTS.
- Turned raw model output into clean, accurate text regions by engineering the detection post-processing: bounding-box scaling, **confidence thresholding**, and **Non-Maximum Suppression**.
- Converted noisy detections into readable text by building an NLP reconstruction layer with **Viterbi dynamic programming** and **SymSpell** correction, with adjustable speech rate and pitch.

CogniStream : Clinical Trial Matcher | *Next.js, TypeScript, Python, Groq LLM, FastAPI* | GitHub **Mar 2026**
- Cut patient-to-trial screening from **30+ minutes to under 15 seconds**, validated on 50 synthetic patients and 30+ trials, by building a 4-layer **Python** and **FastAPI** pipeline (anonymization, deterministic rules, semantic matching, geo-filtering).
- Protected sensitive patient data and kept every decision auditable by implementing HIPAA-focused **anonymization**, **AES-256 encryption**, and audit logging, with explainable pass/fail eligibility reasoning.
- Ranked trial matches by eligibility and location by integrating **RAG** with a Groq LLM, Google Maps distance APIs, and composite scoring.

VAULT | *Solana, Anchor, Token-2022, FastAPI, ONNX Runtime, Next.js 16, IPFS* | GitHub **Dec 2025**
- Verified a decentralized **AI model marketplace** on Solana end-to-end, with **42/42 automated tests passing**, by building the **FastAPI** and **ONNX Runtime** backend and a Next.js app with wallet-based buy flow and model upload.
- Secured paid model access by storing models **IPFS-encrypted** and verifying on-chain payment before granting access, with a 70% creator and 25% compute-provider revenue split.

Technical Skills

Languages: Python, C/C++, SQL, Java, Kotlin, TypeScript
Computer Vision: OpenCV, YOLOv8, Object & Text Detection (OCR), Non-Maximum Suppression, TensorFlow Lite
AI/ML & LLMs: PyTorch, TensorFlow, ONNX Runtime, LLM APIs, RAG, NLP, Whisper (ASR), Model Evaluation
Backend & Tools: FastAPI, REST APIs, Pandas, NumPy, Git/GitHub, Next.js, Android Studio, Solana
Privacy & Quality: Data Anonymization, AES-256 Encryption, Audit Logging, Automated Testing

Experience

Acmegrade | **Certificate** **Feb 2024 – March 2024**
Web Developer Intern
- Built and shipped responsive web application features during a hands-on web development internship at **Acmegrade**.
- Improved UI responsiveness and page performance through code-level optimizations.

Achievements & Extracurricular

- **Winner, COHERENCE Hackathon 2026** — led **CogniStream**, an AI-powered clinical trial matching engine, with Team Paradigm.
- **Top 10 internationally, PEC HACKS 2.0** — built **Serenity**, an NLP-based mental health platform (GitHub), at this international-level hackathon at PEC College, Tamil Nadu.
- **Leadership:** Treasurer, NSS (National Service Scheme); Secretary, Android Development Club; Captain, Kabaddi Team.

Certifications

Fundamentals of Python Certificate | Fundamentals of Java Certificate | SQL Certificate | AI Engineer Certificate
